

Introduction to Go

Kevin W. Gisi

Twin Cities Code Camp 8—April 10, 2010

Summary

Go is a brand-spanking-new systems language that Google released in November, 2009. Every wonder how awesome C would be if it was garbage-collected, concurrent, and didn't take a few weeks to compile? Wake up; it's here! We'll take a look at this new language that steals some of the dynamic flexibility of Python and Ruby, the performance of C, and a compile time that you'll miss if you blink.

Why Do We Need a Systems Language?

```
#include  
main(t,_,a) char *a;{return!0
```

Specifications

- Compiled
- Imperative, structured
- Concurrent
- Strongly typed (explicit or inferred)
